It is curious to me that the Forest has not obtained the data from ADEQ, who is also a cooperator in the process of the EIS and the 401 certification agency. I'm sure that ADEQ can provide the datasets, which include surveyed cross-sections, longitudinal profiles, and photos of Cienega Creek from stem to stern. The bigger question is whether the data could be relevant.

Hi, Mindy,

I placed what I could find in the SWCA folder. I recommend you contact ADEQ. They should have a lot of data, including photos and topo cross-sections. Hans maintained superb records. As I recall, he provided comments on the DEIS to your agency too. You might want to take a look at those.

Hi Julia.

Jeff Simms mentioned yesterday that a good reference for us to have is Lawson and Huth, 2001 or 2002 (he couldn't recall). He didn't have a copy of this but said that you should, so I was wondering if you wouldn't mind sharing that with the FS.

Thanks!
